Interests

My favourite undergraduate courses were Operating Systems and Object-Oriented Programming, where I was able to learn about programming from low to high level as well as understand the utility of design patterns and their importance when developing large scale software.

For the masters course, my thesis goal was to develop a Gamification add-on for the Jira Core, with the main goal of motivating the Scrum usage and improve its adoption. This tool was made mainly in Java for the behaviour, and HTML and CSS for the front-end.

I'm interested in the Agile methodologies, where the ability to adapt to the ever changing needs is embraced, also not forgetting on seeing human to human interaction as vital to produce a better outcome.

Education

- 2017-2019 Masters in Information Systems and Computer Engineering (15/20)
Instituto Superior Técnico, Lisboa
- 2012-2017 Undergraduate in Information Systems and Computer Engineering (12/20)
Instituto Superior Técnico, Lisboa

Experience

- 2015-2016 IEEE Volunteer
Helped on IEEE-IST Academic, IEEE-IST TV and IEEE-IST CS
- 2018 Game Developer
For more details: <http://web.ist.utl.pt/ist176496/DJ/>
- 2018-2019 Inesc-INOV Intern
Internship in Gamification Project
- 2019 Software Engineer @ Multicert
- 2019-Now Software Engineer @ CERN

Work

On Multicert I was part of a project regarding an Android application for digital signature of documents using Citizen Card or others. During this time I used Android Studio to develop and do unit testing of the developed functions, and having Java as the main development language, where there was also a conversion to asynchronous functions for a faster and more responsive application.

On CERN I am part of the integration of the OpenShift 4 integration, where several different Operators are developed (using Kubernetes and Operator SDK frameworks) for automation on website deployment, integration with authentication services (OIDC), and other internal services.
